

The critical path for this sprint is TEAM-63 -> TEAM-22. A handful of tasks this sprint depended on TEAM-63, and TEAM-22 was one of them. There were also some tasks that did not depend on other tasks, for example TEAM-61, TEAM-62, TEAM-15, and TEAM-25. Out of all the tasks that depended on TEAM-63, TEAM-22 took the longest. Their combined time took longer than the individual tasks with no dependencies, therefore the critical path is TEAM-63 -> TEAM-22.

Note: TEAM-67, TEAM-68, TEAM-69, and TEAM-70 are all subtasks and had their time estimation allocated under their supertasks.

To keep our sprint in schedule, we had meetings through Discord and communicated with team members regarding our progress. Although there weren't too many dependencies this time as we were finishing up the project, we still set up dependencies on Jira and followed the dependency requirement before starting tasks. This ensures that our sprint work doesn't get out of order.
